Part of the Scholarly Communication Commons, and the Scholarly Publishing Commons

MANAGE AND PRESERVE YOUR WORK

Scholars' Mine **aggregates your scholarly output** in a single location, instead of having your works spread out across different journals and websites. Scholars' Mine staff perform permission checking and deposit your work, ensuring that all copyright and publisher requirements are met. Scholars' Mine staff also augment your work with descriptive metadata making, it easier for potential readers to search for, find, and use your work.

Every item in Scholars' Mine is given a **stable URL**. This means that no matter who cites your work, or how many times you redesign your Web site or change your vita, readers will always be able to find it. Not to mention the benefit you gain--if your flash drive breaks or your laptop dies, you can download copies of your work from Scholars' Mine.

Works in Scholars' Mine are **backed up multiple times**, so there is no need to to worry about losing your work because of a server glitch or hardware failure. Scholars' Mine staff also employ the latest digital preservation solutions, so your work will **continue to be readable** through changes in technology.

MEASURE YOUR READERSHIP

As an author in Scholars' Mine you will receive **monthly e-mail reports** showing how many works you have in Scholars' Mine and how many times your works have been downloaded in the preceding month. If you sign up for an account with Scholars' Mine, you will have access to the Author Dashboard, which will provide **readership statistics** graphically and in greater detail.

Scholars' Mine—Nurturing the Creation of Knowledge

Scholars' Mine is the institutional repository for the Missouri University of Science and Technology. Scholars' Mine provides access to the digital scholarly and cultural resources created by the university community. This includes faculty papers, departmental publications, conference proceedings, graduate student works, and other scholarly material, as well as campus cultural and historical works.

The vision for Scholars' Mine is to be an active participant in the creation of new knowledge through integration with research and scholarship activities and to create and support communities of researchers and scholars.

INCREASE THE IMPACT OF YOUR RESEARCH

Many journals are subscription-based, which can potentially make your work inaccessible to many researchers who lack access to subscription-based services. Scholars' Mine is regularly crawled and indexed by Google, Google Scholar, Bing and other popular search engines, which makes your scholarship easy to find and accessible to readers worldwide. Scholars' Mine provides complete bibliographic information for the original publication, so readers will always be able to cite the version of record, **helping your citation rates**.

The discipline-specific nature of journals and databases can be a barrier for scholars engaging in interdisciplinary research. Researchers in other fields may be unable to access your work because they are not familiar with the journals and databases in your field. Scholars' Mine provides cross-disciplinary support and tools, making **your work easier to find**.

Full text works placed in Scholars' Mine automatically appear in the larger Digital Commons network of over 1 million articles from 300 participating institutions. Your work is placed in context with fellow researchers and research disciplines and can be browsed and downloaded using sophisticated discipline based searches.

SATISFY YOUR OPEN ACCESS REQUIREMENTS

Granting agencies like the NSF now require grant recipients to deposit peer-reviewed scholarship they fund in open access repositories and databases. Providing access to this material through Scholars' Mine **ensures compliance** with your granting agency's requirements.

IMPROVE YOUR ONLINE PRESENCE

Scholars' Mine provides each faculty member an author profile to **enhance your online presence**. Your profile allows others to see the scope and quality of your work. Combining your profile with the descriptive metadata work done by Scholars' Mine staff allows your scholarship to **rise to the top in search engine results**. Profiles also attract collaborators, future colleagues, and graduate students.

Your profile gives you the ability to **share your work and announce new work** through email and subscriber lists. It also allows your colleagues to follow your work through RSS feeds and mailing lists. You can also share your work through popular social media sites like Facebook and twitter.

Your profile is also portable. You can take it with you and continue to update it if you leave Missouri S&T.

SHARE HARD-TO-ACCESS SCHOLARSHIP

Some forms of scholarship, such as conference presentations, exhibits and performances, technical reports, white papers and student research, are not always available or disseminated widely. These types of work often contain valuable information and can complement peer-reviewed publications. Scholars' Mine provides an **opportunity to share** these works more broadly.
