ANNUAL MINER-DRURY CLASSIC THANKSGIVING.

Imagine, if you can, the first Miner-Drury classic. It must have been somewhat different than our present day game for it took place some thirty-five years ago. Since that time the two teams have met almost every year on the gridiron. There are reasons to believe that the Miner-Drury series of games is the oldest west of the Mississippi. Although this is not definitely established as a fact, it is true that it is one of the most ancient.

During these years, the rivalry has been of the keenest type and the victories have been fairly divided with the Silver and Gold teams holding the edge. In the scoring the Miners possess a decided edge. Twice they have smothered Drury under to the tune of 69-0 while the greatest score the Springfield lads have ever been able to pile up was 42. The games in general have, however, been fairly close, two of them resulting in ties.

This year the game will not be lacking in the least in interest for both teams are out to win and Drury's strength has increased greatly as the season has progressed. So far they have only won a couple of games, but most of the others have been close. Westminster, Warrensburg and Central College were taxed to the utmost in order to defeat them by a lone touchdown apiece. Missouri Valley has given them their only decisive beating and this team will play Central College for the Conference championship.

The "Big Team" rested this week end and should be at full strength for the battle. For the last four years the Drury gang have been forced to take the short end of the score and that makes another reason why they will be out for meat on

THE ENGINEER AS SEEN BY HERBERT HOOVER.

Extracts from an article by Herbert Hoover entitled "The Engineer" and appearing in the November issue of "The Professional Engineer" follow:

"The engineering profession was originally recruited from the ranks of superior mechanics and it has taken a long time for the public to grasp the fact that the engineer of today is no longer an artisan.

"Engineering has become the most difficult profession in the world, one which requires exhaustive study and training, and which eliminates more men in its course of training, and subsequent practical application of learning, than probably any other profession.

"Engineers comprise a body of men whose activities are characterized by precision of thought, men who are firmly anchored to fact, whose whole background mental and moral, requires of them fidelity and truth in determining and dealing with fact. Furthermore, in order to be successful as engineers, they must have the ability to weigh facts and view them in the proper perspective. Nothing is so much needed in our nation and civilization as the replacement of qualitative thought by quantitative thought.

"We are dominated, in our present stage of development, by the economists. As Mr. Wesley Mitchell has said, "Some of the economists are badly in need of a little engineering training." There is today very largely a qualitative science. I often think that some economists weigh the importance of economic argument according to the area of paper required to set down respective arguments pro and con, when as a matter of fact, the economic forces can, in their results, at least, be

Continued on page two.

DRURY RESERVES DEFEAT MINER "B" TEAM.

In a well played and interesting game the Panther Reserves defeated the Miner Reserves 6 to 0 last Friday. The Miner team played an excellent game of football but were unable to score on the Drury bunch. The Miners had the edge in everything but punting, and the Drury team was able to take advantage of an opportunity in the second quarter and score the only touchdown of the game.

ANNUAL FRESHMAN- SOPHOMORE FOOTBALL GAME, DEC. 1ST.

Next Saturday afternoon the Freshmen and Sophomores will engage in the annual so called football game to determine the supremacy of the two classes. The game is called for two o'clock at Jackling field and will officially terminate the football season at M. S. M. The senior varsity football men will act as officials and the game promises to be intensely interesting.

The teams from both classes have been practicing consistently for the past few days and the rivalry between the two classes has been keen. As is the custom varsity men from the two classes will not be eligible to play but the men who were on the squad and did not make a letter will be allowed to play.

CIVIL SERVICE EXAMINATIONS IN FEBRUARY.

The United States Civil Service Commission has adopted a new plan in the handling of its examination for technical positions of the junior grade. The plan provides for the holding of such examinations annually, those for junior engineers to be given some time in February.

With the revised schedule of

Continued on page 8

Continued from page 1

measured quantitatively. It is often the case that one adverse argument quantitatively, will out weigh forty favorable qualitative arguments. A cross-breed is needed between the thought of the engineer and the economist, because the two of them are dominating modern civilization.

"I have been interested recently in reading some of our public statements to see how the terms 'horse-power,' and 'kilowatt,' 'nitrogen' and 'nitrates' have been used interchangeably throughout long debates, until I have begun to wonder whether or not some people know the difference between a cow and a kilowatt. I hear the glib use of such terms as 'super-power' and 'giant power' dressed up in poetic aspects, such as, gigantic tendrils stretching throughout the land carrying the blessings of power in some new and undescribable fashion.

"As a matter of fact, the engineer seldom if ever uses these terms. There is little of the poetic and nothing of the demagogic in his talk about central power stations and interconnection. We do say what we mean, we understand our own terms, but they are not terms on which to base vast orations to be delivered to the public, and therefore, we find ourselves perhaps unduly repressed by the general rule of our profession which is to stick to precision of thought and to reality in terms.

"The engineer has a great purpose, one far apart from his daily activities. The very character of his profession is that of service and in this he is not limited to the immediate problems at hand, but is given the opportunity of extending that service far beyond the limits of daily tasks into the field of civic and national affairs.

PLAY and Pleasure that are not associated with a man's business are never permanent.

ROLLA STATE BANK

TAU BETA PI

Nine seniors and the honor man of the junior class were admitted to full membership in Tau Beta Pi, national engineering honor fraternity, at the initiation ceremony last Friday. The initiation was followed by a banquet in honor of the initiates at the Pierce Bus Terminal. Initiates

were: F. Beatty, R. Beatty, Crum, Miller, Kirn, Harvey, Johnson, Palmer, Bolon, and Miles.

LAMBDA CHI DANCE.

Another successful dance was thrown last Friday night by the

Blasting Circuits

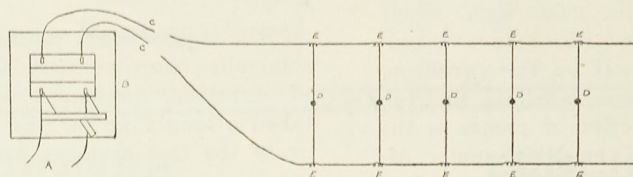

Fig. 55.—Parallel connections. A. Power or lighting circuit. B. Blasting switch for closing circuit. C. Leading wires of sufficient length to keep the switch "B" a safe distance from the blast and to reach to the last hole to be fired. D. Bore holes with electric detonators. E. Connections between the detonator wires from holes "D" to the leading wire "C".

Lesson No. 3 of

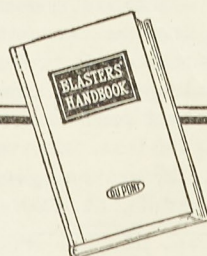

BLASTERS' HANDBOOK

EVEN the way that wires are twisted together in making connections has an important bearing on proper use of explosives. Electric blasting is hedged around with most elaborate rules and precautions. There are series and parallel connections, parallel series and series parallel circuits. Blasting machines or power circuits for electric blasting are surrounded with great mystery.

In Chapter Three of the *Blasters' Handbook* this matter of blasting circuits is illustrated and comprehensively described. The selection and use of galvanometers, rheostats and blasting machines are explained. Tells how to prevent misfires, how to test a circuit, how to locate a break, how to use a resistance table and many other practical phases of blasting circuits.

The *Blasters' Handbook*, prepared originally for the use of du Pont field service men, is an extremely practical reference and study work. Leading technical institutions are using the *Blasters' Handbook* in their classrooms. Pocket size for your convenience.

This coupon will bring you a copy FREE. Send it off NOW.

PROF. DEAN PUBLISHES RESULTS OF HIS LONG DISTANCE POWER TRANSMISSION INVESTIGATION.

The results of an investigation of the performance of a long-distance transmission system with synchronous reactors shunted across the line and capacitors in series with the line have been published by Prof. Geo. R. Dean for distribution among his friends who are interested in the matter. The principal results of Prof. Dean's investigation are:

1. Graphical and analytical methods of calculating load voltage, reactor current and load current for a given load power factor and generated E. M. F.

2. Graphical and analytical methods of calculating efficiency of transmission for a given load voltage and load power factor.

3. Formulae for maximum efficiency of transmission and corresponding load voltage, load current, power factor, and reactor current.

4. The reactance of a series reactor for maximum efficiency.

In a foreword in the publication Prof. Dean says: "This paper has been rejected by several editors of engineering journals as 'too mathematical for the average reader', so I have mimeographed a few copies for distribution among my friends."

THETA TAU.

"Modern Methods of Automobile Manufacturing" was the subject chosen by Prof. A. V. Kilpatrick of the Mechanical Engineering department, in his speech before the Theta Tau fraternity last Wednesday evening. Most of his subject matter was based on actual experiences at the Reo and General Motors Oldsmobile plants.

An announcement of this semester's pledges was given out. The men are: A. P. Heiser, J. E. Barton, J. R. Jarboe, R. H. Parker, H. C. Bolen, M. F. Thomas, J. C. Defoe, G. F. Heath, K. R. Neal, R. L. Richardson, and W. T. Sharp.

After the formalities were over, the meeting was concluded with a sociable smoker.

DISPLAY OF JUNIOR

RAFFLE PRIZES

In the window of the Long Telephone office will be displayed this week the Junior Raffle prizes—a Majestic radio, all complete, and a Remington automatic shotgun. As prizes they can't be beat, take a look and see for yourself.

BETTY HARLIN'S DANCERS

IN JUNIOR CLASS BENEFIT.

On December 14, Betty Harlin and her fast-stepping dancing troupe will make another public debut. This time the dancers will perform in Parker Hall for the benefit of the Junior Class. Everyone concerned is working hard to make the show a success in every way.

In a recent issue of the "Drury Mirror" there is an account of the Drury-Missouri Valley game and the score is not mentioned either in the article or the headlines. This is our idea of 'fourth dimensional' journalism.

THANKSGIVING.

Persuant to custom President Coolidge issued the usual Thanksgiving proclamation, calling upon the people to "Cease from their daily tasks and in their homes and their accustomed places of worship devoutly give thanks to the All Mighty for the many and great blessings they have received, and seek His guidance that they may deserve a continuance of His favor."

It would not be altogether out of place for us to pause for a moment's contemplation on our own lot during the past year. We have been privileged to be a part of one of the greatest engineering schools in the United States. It is our good fortune to have presented to us a technical training in our chosen field of endeavor. We have enjoyed good health, we are mentally alert, and we are looking forward to taking our places among the active workers in the great industrial world.

May we not as students of M. S. M. appreciate our good fortune and realize the excellent opportunities that are ours.

PASSING THE BUCK.

At the beginning of the year excellent plans were prepared for an all year intramural sport program. The semester is more than half over and the plans which aroused so much favorable comment and no little amount of enthusiasm remain merely a scrap of paper. The athletic department ran into a deadlock on their first attempted move, and the two sides till stand with locked horns. The party of the first part has made an ascertainment and they will not be moved, likewise the party of the second part is equally determined to stand by their ascertainment. It is quite plain that neither plan will satisfy both sides, and it is also plain that a settlement cannot be reached unless both sides become less dogmatic and arrange some satisfactory compromise.

Meantime these is a general shifting of the blame to the other fellow and we are without any intramural competition, facing the possibility of not having an intramural tournament in basketball.

The athletic department very wisely and sanely refuses to make an arbitrary decision in the matter, and the situation remains as it has for many weeks with no one willing to take the initiative.

M. S. M. LECTURE.

It cannot be said that Floyd C. Shoemaker of the Missouri State Historical Society had a large and representative audience last Thursday evening. Yet the students, faculty members and town folks that did attend the lecture were obviously interested and appreciative of the speaker's message, which is perhaps infinitely better than a hall full of cynics and ridiculers.

There was a wealth of historical data and vital facts of Missouri in Mr. Shoemaker's address and despite the circumstance that his voice was high pitched and nasal, one could not but admire the aggressive brilliance of the delivery.

Mr. Shoemaker stressed the importance of Missouri to the nation, past and present influence, and the miraculous progress made during the last century. In conclusion he gave a brief account of the lives of such Missourians as Daniel Boone, Eugene Fields, Pulitzer and T. Benton.

SOME RECENT ADDITIONS

TO THE LIBRARY.

Library statistics for the past year show that the average daily issue of fiction is about 49 percent of the total number of books issued. This would seem to show that aside from his text-books, the average student like most of the rest of us, reads principally fiction. So we will start with the fiction.

The two chief sources of fiction in M. S. M. library are the Book Club and the Rental Collection. Just be-

fore the end of last year the Book Club turned over to the library fifty books. These were an unusually interesting lot of books, including such good fiction as Cather's "Death Comes for the Archbishop"; "Jalna" by De la Roche; two Bromfield books; Deeping's "Sorrell and Son"; Ertz's "Now East, Now West"; Peterkin's "Black April"; Rinehart's "Lost Ecstasy"; Wescott's "The Grandmothers;" and one of the famous Van Dine "murder cases." Such non-fiction as the two volumes of Sullivan's "Our Times," with its entertaining description of American issues and personalities of the last twenty-five years, and its wealth of

amusing illustrations; the two travel books by Richard Halliburton, "The Great Adventure" and "The Royal Road to Romance", and the year's best-seller, "Trader Horn," are as good reading as the fiction. Another notable book that comes to us from the Book Club is "The Axe" by Sigurd Unset, a Norwegian writer whose work has been awarded the Nobel prize recently. This is well worth reading both for its story and for the picture it gives of Norway in the Middle Ages.

Some of the older books in the Rental Collection are still holding their own; for example: Burt's "Delectable Mountains" and Wilder's

"Bridge of San Luis Rey." Some fifteen new fall books were added in October and another order is expected this week. Those who have read Galsworthy's three novels in The Forsyte Saga will enjoy the end of the story in his "Swan Song." Anne Parrish's "All Kneeling" is an amusing character study of a beautiful woman who knew her charm. Wren's "Beau Ideal" is said to be as good as his "Beau Geste" and "Beau Sabreur."

To turn to the non-fiction. In poetry, we have the two long narrative poems, "Tistram" by Edwin Arlington Robinson, and "John Brown's Body" by Stephen Vincent Benet. The "Tristram" is a beautiful re-telling of the Arthurian romance of Tristram and the two Isults. "John Brown's Body" is a Civil War narrative, it was chosen by the Book-of-the-Month Club as one of its recent selections. A very good selection of short poems is to be found in L. A. G. Strong's "Best Poems of 1928." Speyer's "Fiddler's Farewell," the Pulitzer prize verse of 1926-7, is said to be in line with the best the modern group is doing in poetry.

For those interested in anthropology and archaeology, some little books issued by the Yale University Press in a set called "The Corridors of Time" will be found readable and valuable as summaries of various phases of the subject. We have the four volumes which have been published so far.

Two books which should be of timely interest, even though the election is over, are Beard's "American Party Battle" and Garrison's "Catholicism and the American Mind."

A book which promises to be widely read and discussed is Beard's "Whither Mankind" a symposium on the panorama of modern civilization. Beard merely edits the work; the chapters are contributed by men of authority on the various topics. Dewey writes on Philosophy; Martin on Education; Van Doren on Literature; Havelock Ellis on the Family; Bertrand Russel on Science and so on.

Biography is well represented with books on Conrad, Darwin, General Grant, Lincoln, Woodrow Wilson, and Dean Briggs of Harvard. The first volume has arrived of a new "Dictionary of American Biography" which is to do for American biography what the famous "Dictionary of National Biography" has done for that of Great Britain.

WHOOPEE! JUNIOR CARNIVAL

"The" carnival, not "a" carnival but "the" carnival. We feel sure that everyone is looking forward to this super event with an admixture of excitement and intense expectancy. There is a hint in the air of big things from the big city. This together with excellent talent from our 'old home town' should give each and every one all they ever expect and more. Attraction and side shows and then more side shows and attractions; prizes in store for those who might be persistent or fortunate. And, by the way, not Woolworth prizes, but real things—things that satisfy, others you'd walk a mile for and you don't have to be nonchalant upon receipt.

Be fair with yourself, give the Juniors a break and help make "whoopie" if you know what we mean.

BINGO

One of the many attractions of the junior carnival will be a corn game. One of those old-fashioned games played back in '49. The old type of game played before poker chips were invented and when gold dust was used for dollar bills.

The prizes will well be worth the chance of a few nickels. Prizes that will mark one evening of fun and enjoyment. A prize will be given away at each dealing. Just think,

you may be the one to carry away the grand prize.

The corn game is very interesting and involves a great amount of fun. Some one has to win at every deal. Come up and try your luck.

FORTY-NINER DANCE

Yea Miners, get hot, get your partner for the big Forty-Niner Dance. Yes, sir, only five cents to participate in the biggest, warmest, and fastest dance of the year. Nothing will be lacking to make the environment complete. Imagine the colorful background of fast-stepping señoritas and dashing miners of '49, Kit Carson specials, barbequed bear meat and hard tack. Come on, Miners, don't miss the biggest and most spectacular event of the carnival.

ATTENDANCE PRIZE

An added inducement, Miners! Attractions and prizes aplenty, and on top of that a fine attendance prize to the Junior Carnival: "Mac" Bunch is offering to the lucky one a prize of a 10-dollar ticket for valetory service at his shop. You don't even take a chance on this prize, its the prize for the lucky one among the crowd.

BIG DEAL CLOSED.

While in St. Louis recently Ed

Watson closed a deal for a big bill of carnival goods. Ed surely had the interests of the Miners at heart when he made the deal, and the merchandise he secured shows it. This display of merchandise will be on hand the night of the carnival, and even if you take no chances on the display its worth while seeing.

THE YELLOW DOG SALOON.

Is there a single man among you who would not give his left eyebrow for a chance to visit a real, honest-to-goodness saloon and to kill a few (soft?) drinks there? No!

The Yellow Dog Saloon will be like the saloons we used to have back in the good old days—the days of '49. It will be furnished according to the approved style of '49, with a bar, gambling tables and what not. Behind the bar you will see a real, genuine bartender, a rough-and-ready guy that knows his drinks (and how!) The bartender, the waiters, bouncers and gamblers will be dressed like men dressed in the olden days, in fact everything will be just as it was back in '49. The Chink cook will have plenty of grub fixed up, so there will be plenty to eat.

This is an opportunity that comes but once in a lifetime. If you miss it, you will sure be sorry.

salaries the federal Government is now offering for its technical, professional, and scientific positions, appointees can look forward to more of a future in government work than has been the case in the past. The junior grade positions now pay \$2,000 to start, and promotion up to \$2,500 is possible without a change in assignment. The salary range for all the grades is as follows: Juniors, \$2,000-\$2,500; assistants, \$2,600-\$3,100; associates, \$3,200-\$3,700; full, \$3,800-\$4,400; senior, \$4,600-\$5,200; principal, \$5,600-\$6,400; head, \$6,500-\$7,500; chief, \$8,000-\$9,000.

Definite information regarding the next examinations and application blanks may be obtained from Mr. Hubbard in the Registrar's office. It is not a bad plan to have an application on file, as it costs nothing except mental effort to take the examination. The examinations are held in Rolla. Senior students who will graduate this spring are eligible.

Sayings of the great: Well, that's one tradition I am going to break.
