The DIRECTOR'S COLUMN

By DR. W. R. CHEDSEY

At the opening of a school year, such as the present time, it is indeed pleasant to renew old friendships and to make new ones. Hence, I add my greetings to both returning students and to the students on our campus for the first time. I sincerely hope that your period of study here will be productive of good, not only in technical training, but also in character development, for that is of first importance in making a success of your life work. Let us tackle our jobs with renewed energy and with a clear-cut vision of why we are doing them.

It is not so much what you do in this world as how you do it. If what you are doing you can do better than anyone else, you are a success. It is not necessary that you do an entirely original thing, but whatever you do must be done in a thorough way, and here originality helps. Improve the thing that you are doing, and watch success begin to come your way. One man may get nothing but discord out of a musical instrument; another may get the sweetest harmony. No one claims the instrument is at fault. Life is about like that. The discord is there, and the harmony is there. Study to play it correctly, and it will give forth music; play it falsely, and it will undoubtedly give forth ugliness. Life is not at fault, but depends upon what we make of it.

Your program of classes is made out at the time of registration. To supplement this, you should make out a program of study so that your time is efficiently utilized and there is no dilly-dallying wastage there. Waste, by the way, is the engineer's pet hate—there should be none of it if it is possible to avoid it. Find some time for recreation every day and keep yourself in good physical trim; one has difficulty studying if his body is fatigued or weary.

Again, I extend cordial greetings to you all and hope that the year will be well worth the effort put on it.

Wm. R. Chedsey.

Gifts Received by Geology Department

During the past year and a half, the Geology Department has received as gifts from Mr. Kurt H. de Cousser a great amount of valuable material, it was announced by the Department last week. Of these gifts some of the more important are as follows:

A collection of trilobites from the Silica Shale of Ohio which will soon be displayed on the second floor of Norwood Hall.

A number of complete sets of well cuttings from the Michigan oil fields which are being used by Assistant Professor J. S. Cullison in the Petroleum Geology laboratory.

Maps and well logs of the Michigan fields which are also being used in the laboratory.

Every visit which Mr. de Cousser has made to the school since his graduation has always resulted in a contribution of very interesting and useful geologic material to the institution, the Geology Department stated. Among the collections in the Section of Paleontology his name ranks in the foremost group of donors and collectors for the institution, the Department said.

Another recent contributor to the geologic collection of the school is E. A. Huffman, who presented the Department with samples from oil wells from oil fields in Kansas. The samples were collected for use in sedimentation and were selected to illustrate variations in lithology in the Kansas oil area. Mr. Huffman is a graduate of 35 and is now employed by the Skelly Oil Company at Wichita, Kansas.

The Geology Department is very grateful to Mr. de Cousser and Mr. Huffman and wishes to take this opportunity to thank them for some very welcome specimens. Other material which any graduate may wish to send in will be appreciated, stated the Department.

Seen at the Carnival

Prof. Johnson selling dime a dance tickets.

Dr. Schrenk applying excellent laboratory technique to a popcorn machine.

Prof. Rankin dispensing ice-cream with mathematical accuracy—exactly 4.33 cents worth for 5.00 cents.

Dr. Feind operating on hot dogs. Dr. Barley munching popcorn in the ring booth. Tsk. Tsk. Doctor, your pronunciation was terrible.

Coach Bullman and Prof. Dennis trying to give a poor little mouse exercises.

Emily McCaw and Mrs. Sease trying to swindle the public in the ring booth.

NUMBER 1

1938-1939
OUR SILVER
ANNIVERSARY

DOCTORATE IS CONFERRED ON MSM DIRECTOR

Colorado School of Mines Honors Dr. Chedsey for Service in Education

Director William R. Chedsey was granted the honorary degree of Doctor of Engineering at the Commencement of the Colorado School of Mines at Golden, Colorado, on May 27, for distinguished service in engineering education.

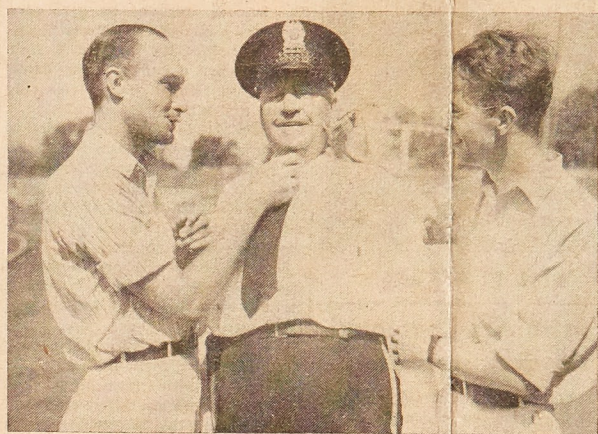

Dr. Chedsey graduated from the Colorado School of Mines in 1908, and following several years of practical experience in the west, Alaska, and Central America, he entered the teaching field. He was for 21 years head of the mining department of Pennsylvania State College, coming to M. S. M. as Director last September.

Dr. Chedsey, since entering the teaching field, has been active in the development of the engineering profession, taking an extensive part on the educational committees of several of the national engineering societies and organizations. He is at present a member of the executive committee of the education of the American Institute of Mining and Metallurgical Engineers which is supervising the preparation of a bulletin on vocational guidance in connection with the mineral industry. He is also a member of the committee on papers and programs of the mineral industries division of the Institute, on the research committee of the coal division, and on the special committee to correlate prizes and awards.

Last year Dr. Chedsey was president of the Coal Mining Institute of America, and is now a member of the executive committee. On coming to Missouri last fall Dr. Chedsey at once identified himself with the educational field in this state, and is now serving as president of the Promotion of Engineering Education, and also as vice-president of the Missouri Museum Association.

Dr. Chedsey left on May 25 for Golden to receive the degree, and was accompanied by Mrs. Chedsey and the two younger boys. He visited several of the western mining schools and mining districts on the trip, and also contacted the alumni of the Missouri School of Mines in that region. He returned to Rolla by way of College Station, Texas, where he attended the annual meeting of the Society for the Promotion of Engineering Education, held the last week in June at the Texas Agricultural and Mechanical College.

Seniors 'Dry-Shave' Local Police Chief

—Photo by E. C. Compton

The old Miner rule that only Seniors may go unshaven caused John Livingston (left) and Bob Dieffmbach to shave veteran Police Chief Rowe Fort last week.

First Meeting Held by St. Pat's Board

Plans for coming social functions at the School of Mines were discussed Wednesday evening, September 7, at the first regular meeting of the St. Pat's Board for the new school year. The first dance to be sponsored by the organization this fall will be the FROSH FLING at Jackling Gym from ten till two on the night of Saturday, September 17. Several dance bands are under consideration for this year's HOME-COMING DANCE, which should be especially well attended by Alumni due to the visit of Dr. D. C. Jackling to his alma mater at that date. A discussion was also held concerning the desirability of placing two more independent representatives on the Board. The purchase of a new school flag is also under consideration.

During the past summer the St. Pat's Board has made several improvements on the campus. A new drinking fountain has been installed immediately outside of the entrance to the gymnasium floor. This fixture has been badly needed for some time and will be really appreciated by everyone attending school dances and also by the students who play basketball. Four chairs and a davenport of modernistic design with red leather upholstery and aluminum tube framework have been donated by the Board to the Club Room in the Metallurgy Building.

Impressions of M S M Revealed by Freshmen in Exclusive Interviews

Astounding Information Is Obtained from Tenderfeet in Big Scoop by Miner Star Reporter

By Clyde Cowan

"Hey, Freshman, got a match?" "—Gee, I never wrote my name so much in all my life as I did today on that white card."—"Alright, off with your pants, Freshman!"—"OK Moeller, wake up, the special lecture is over."

Yep, you guessed it, first thing—the frosh are here. The town is once again decorated with those pretty green caps and those stunning suspenders. The campus once again swarms with blue denim overalls and new faces. As it has been over a year or so since we have ourselves been in those overalls, and since "Time dulls the looking-glass of memory," we were curious to know just what goes on behind those new faces, just what kind of an impression our school, our town, and we, ourselves, make on these tenderfoot Miners. The solution lay in interviewing a representative few. We did, and here are some of the results:

Reporter: "Mr. Durphy, what do you think of our school, in general?"

Durphy: "Well sir, I'll tell you, it's like this," (note the beating under the scrub) "I think that if we had a few more new buildings and a little more laboratory apparatus the school could start offering some courses in engineering."

Rep.: "But Mr. Durphy, don't you think that we can learn our courses without the fine buildings? After all, isn't it sufficient that we have a fine faculty?"

Dur.: "Oh, I don't know. The other

day my foot went through one of the steps in Mechanical hall, and dog-gone it, Prof. Rankin is still laughing."

Rep.: "Mr. Gore, I see by your headgear that you are new to this institution. Would you kindly tell me what your impressions of the freshman initiations are?"

Gore: "W-e-e-l-l, I guess that it is O. K., but gee, they didn't have to start so soon by mobbing us at the train. I saw Barron the other day handing out tissue paper tickets in front of Followill's because he said that there were nine fraternities including the Triangles. Gosh, I didn't know that the Triangle was a frat."

Here the reporter, assuming that there was at least one Smith in the Freshman class, yelled "Hey, Smith, you with the green cap." He was immediately surrounded by Smiths—big Smiths, little Smiths, fat Smiths, and one medium sized Smith. Singling this one out to one side, he said, "Mr. Smith, what do you think of our chemistry lab?"

Smith: "Aw, that darn Maise told us that the glass in the test tubes was specially hard and that we could bounce them on the floor. Well, take it from me, it can't be done. I had quite a time with my wash bottle, too. The smoke got in my eyes and you should see the mess that bottle is in."

With that, the one o'clock whistle blew, the frosh disappeared and we wandered on figuring "Oh, Well—"

CONFERENCE ON MINERALS IS PLANNED

Meeting to be Held for Mutual Benefit of Producers and Service Institutions

A Missouri Minerals industry Conference, sponsored by the Missouri School of Mines and Metallurgy and the Missouri Geological Survey, is to be held at the School of Mines on October 21 and 22.

The object of the conference, according to Dr. William R. Chedsey, Director of the School of Mines, is for the mutual benefit of the producers of mineral products and the service institutions that are supported by the states. It will take the form of the presentation of problems of the various mineral industries by important mineral producers. Dr. H. A. Buehler of the Missouri Geological Survey, S. M. Shelton, supervising engineer of the Mississippi Valley Experiment Station of the U. S. Bureau of Mines, and Dr. Chedsey of the School of Mines, will outline the services that are now available to the producers of minerals in Missouri. By such interchange of thought, Dr. Chedsey said, each group will have a better knowledge of the needs of the mineral industry and the service by state institutions that will be best adapted to obtaining the most needed results.

Dr. H. A. Buehler, for many years head of the Missouri Geological Survey, and generally regarded as one of the best informed men in the state in regard to the mineral industry, stated that the minerals of Missouri are one of the state's most important natural resources. There is a greater variety of commercial mineral deposits in Missouri, Dr. Buehler said, than in any other state in the Mississippi Valley. With the need of new materials and rapid advancement in greater refinement and new uses, the mineral industries face many important and vital problems.

The state maintains at Rolla the Geological Survey, whose duty it is to endeavor to find new ore deposits and help conserve those already in production. The School of Mines has long maintained a mining experiment station, which works in cooperation with the Mississippi Valley Experiment Station of the United States Bureau of Mines, also on the campus, for the purpose of studying the refining ores found in the state and making them available for new uses.

Thomas Receives Doctor's Degree

Professor C. D. Thomas, who has been in the Physics Dept., of M. S. M. since 1930, last month received his doctor's degree from the University of Missouri. Professor Thomas graduated from Northeast Missouri State Teachers College with a B. S. Degree in 1927 and received his A. M. degree from the University of Missouri in 1931.

Prof. Thomas spent his leave of absence last year doing research work under Dr. N. S. Gingrich; specialist in X-ray work, in completion of requirements for his doctor's degree.

The Committee on Doctor's Degrees were well satisfied with the results of Prof. Thomas' work on the diffraction of X-rays by liquid potassium and allotropic forms of phosphorus. Prof. Thomas showed for the first time that the fundamental group of atoms of phosphorus molecules in the liquid state is four.

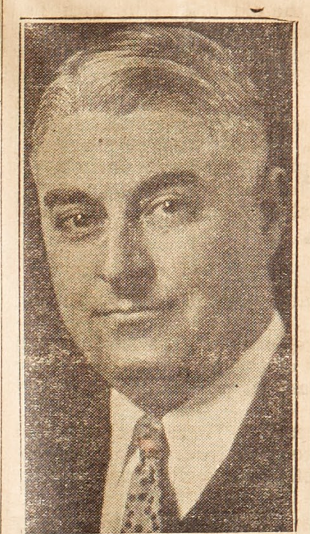

Most of the work on the quantitative phase of diffraction of X-rays by liquids, a field of investigation which has existed only a few years, has been done at M. I. T., and lately at the University of Missouri. A report on his work was given by Professor Thomas at the annual meeting of the Am. Physical Society, held at Washington, D. C., last spring.

Herbert Volz Named Shamrock Club Head

Herbert Volz was elected President of the Shamrock Board of Control last Friday for the ensuing year. Gene Olcott, another Junior, was elected Secretary-Treasurer. The remaining members were elected to the board were Armin Fick and Alan Summers, Sophomores; Frazier Stewart, Junior; and Jim Parker, Senior. Robert Pohl and James Carroll were selected by the Freshmen as non-voting representatives.

The Shamrock Club is a cooperative boarding club, which was known on the campus last year as the M. S. M. Forum. This year the club has been renovated and its membership has been increased from 40 to 70. Most of the new men have been drawn from the ranks of the Freshmen. The grade point average of the club last semester was 1.52.

To Oklahoma A & M

Prof. C. E. Bardsley

Bardsley Resigns to Teach in Oklahoma

Prof. C. E. Bardsley, who for 18 years has been connected with the teaching staff of the School of Mines as professor of hydraulic engineering, has resigned here to take up similar duties at the Oklahoma Agricultural and Mechanical College at Stillwater, Ok.

He was graduated from the School of Mines and Metallurgy in 1920, and in 1926 received the degree of Doctor of Science in Engineering from the University of Michigan. He later attended Northwestern University and for the school year 1928-1929, Dr. Bardsley was a Freeman Scholar for the American Society of Civil Engineers, studying hydraulic engineering in Europe. He was enrolled in the Engineering College of Berlin and also visited in other countries in Europe studying hydraulic laboratories and hydraulic methods.

Soon after graduation here, Dr. Bardsley worked out a new method of determining the meridian astronomically which enabled surveyors to determine true north and south without knowing the exact time when they make their observations, which had previously been necessary. This method attracted international attention in the engineering field. He is a member of the Hydraulic Research Committee of the American Society of Civil Engineers and on a similar committee for the Society for the Promotion of Engineering Education. He is also vice-president of the National Society of Professional Engineers.

Sophomores Overwhelm Freshmen in Traditional Class Day Fight

Class of '42 Forced to Submit Weekly to Freshman Rules and Customs as Climax of Freshman Week Is Reached

By Fred Finley

A thoroughly subdued freshman class was herded down Pine Street in a bare foot snake dance by shouting, jubilant sophomores last Tuesday in the climax of a series of events designed to impress upon the freshmen customs and rules to the letter.

During Freshman week enormous quantities of the traditional Freshman green paint were used each night in painting "42's" and insults to the obviously absent sophomores over the sidewalks of the campus and down town Rolla. Sunday evening, however, the upper classmen poured into town for registration Monday morning, and then ended the reign of the 42's. Group of trusser-less freshmen were seen that night in several places over town industriously removing the obnoxious green signs under the supervision of the revengeful 41's.

Monday night, however, marked the first major defeat of the frosh. After a peaceful hour spent learning the school songs and yells at the fairgrounds under the direction of the Student Council, the courageous freshmen, 250 strong boldly departed for town in spite of warnings of what'd be happenings might befall them on the way. As they moved toward town, threats and insults from a tiny group of some 175 sophs on the golf links drew the freshmen to their

(See CLASS FIGHT, Page 4)

ENROLLMENT LARGEST IN M S M HISTORY

Registration Increases 18 Per Cent Over Past Year's, and 116 Per Cent Over That of '33

The School of Mines has by far the largest enrollment in its history this year. The present enrollment includes 243 Freshmen, 190 Sophomores, 165 Juniors, 123 Seniors, 11 Graduate students, and 20 Unclassified. This gives a total enrollment of 752.

A little comparison with previous years will show how rapidly the school is growing. At this time last year, the enrollment was 639. This gives an increase of 18% in the enrollment this year. In 1933 there were 348 students registered at the beginning of the first semester. These figures show that in the last five years there has been an increase of 116% in the number of students in M. S. M.

The Freshmen registered on Wednesday, Aug. 31, about 223 enrolling that day. The remainder of that week was spent in giving the Freshmen placement examinations, in familiarizing them with the school and its customs, and in entering them. On Wednesday night the 42's were guests of the faculty at a smoker given in the gym. The churches of Rolla were hosts to the students on Thursday night when a reception was held in the gym. Friday night was free show night and the Frosh were guests of the Rollama Theater.

Close to 500 upperclassmen registered Monday, Sept. 5. There have been no previous years when so many students swelled the enrollment to its present level.

The Freshmen were given three tests this year. These were the Strong Interest Test, the Iowa High School Content test, and a drawing placement test. A new feature was introduced this year in that the tests were all graded immediately and the records are now in the Registrar's Office. Another new feature was the photographing of all Freshmen and the placing of the photographs on their individual record cards.

Prof. Justus Rising, Head of the Drawing Department of Purdue University at Lafayette, Indiana, was a visitor on the MSM campus on Friday and Saturday of last week. For the past eight years he and Dr. Clair V. Mann, Head of the M. S. M. Drawing Department, have collaborated on the Strong Interest and other tests. Prof. Rising was here to watch the testing program during Freshman week. He was particularly interested in the way the tests were graded. There are 1200 Freshmen engineering students at Purdue and it is a great task to score the tests. Prof. Rising has been looking for a machine to do this scoring but he hasn't found a satisfactory one yet. He thinks he will adopt the same method that is used here. This consists of having the students themselves do the grading.

John Post, President of the Student Council, presented Prof. Rising with a Freshman cap and suspenders which he wore about the campus during his stay here. He was also given the regular Frosh inspection by some of the upperclassmen.

Dr. Mann was in Joplin, Mo., the latter part of last week giving the Strong Interest Test to seniors of the Joplin High School and to freshmen of the Joplin Junior College which was only recently established.

Former M.S.M. Man Dies

Wood D. Beeghly, ex M.S.M. '14, passed away at his home at 509 Willowbrook Ave., Stamford, Conn., on May 29. His death was sudden, resulting from a cerebral hemorrhage. He was 47 years old, and at the time of his death was serving as Captain and Commanding Officer of the Third Headquarters Combat Train, 192nd Field Artillery.

Feind Infant Dies

Funeral services were conducted by the Rev. Dow G. Pinkston on July 29 for Rosemary Feind, infant daughter of Dr. and Mrs. E. E. Feind, who died on July 28 at the age of two days. Interment was made in the Rolla Cemetery.

VOLUME XXV IS HERE!

A little eight inch sheet printed on a hand press appeared in 1915 at the Missouri School of Mines. Three students conceived the idea and put it out during the first year. The circulation cannot have been more than a hundred.

The School of Mines grew and the Miner grew right along with it. Now the school enrollment is over seven hundred and fifty, and the circulation of the Miner has grown to one thousand.

The little leaflet has grown to a full seven column newspaper page. A competent staff of over thirty men are engaged in the enterprise, with carefully organized duties and well trained specialists in charge. Where the type was hand-set at first and printed on a small hand press, the copy is now set on an Intertype and the paper is printed off on a large, modern cylinder press.

This year, the twenty-fifth anniversary of the founding of the Missouri Miner, marks also the attainment of its full growth. We are grateful to those who have paved the way and we are confident of future achievement.

Many new features grace this new Miner and we feel that we have made improvement on the old ones still with us. Notice the new style of newspaper makeup on the front page. This is the most modern development in American journalism today, and we are the first college newspaper to introduce it into Missouri.

Look at the Sports Page. New cuts for columns, a new M. I. A. sports news column, and complete coverage are its characteristics. Look at this page, with its similarly novel style of make-up, interesting columns and features.

This is the NEW MINER. What do you think of it, Miners?

TO THE FRESHMEN!

We want to extend our figurative hand to you Frosh just starting at MSM.

After being confounded by registration, bombarded with tests, and run through the mill of the class fight, you may be wondering what other pleasant surprises may be staged for your benefit.

We wouldn't worry if we were you. We're just trying to start you well on the path to freedom from your mother's apron strings in your manner of living, and toward making embryo engineers out of you.

You will soon learn much about living away from your parents' supervision. You will learn about bad things as well as good—you will have to learn how to take the good and leave the bad. We are not going to tell you what is good or bad—we are not moralizing, we are stating facts.

Your chances of employment upon leaving this institution are mostly dependent upon your record while here. You cannot make a good record if you waste your time and health, as well as your money. When you leave here, you will be on your own not only as far as your social life is concerned but also financially. You are here to achieve independence.

Ponder upon that for a while!

BRAVE MEN

Our congratulations and felicitations go this week to Bob Mann, son of Dr. C. V. Mann, and to Harold Volkmar former MSM student, who were recently married to the former Misses Shirley Danson and Jean Mollett, respectively.

THE MISSOURI MINER

SEPTEMBER 14, 1938

Page 2

As a MINER SEES IT

Just plain chatter about campus happenings

Once upon a time some wise guy picked green for the Engineer's color. But the Miner who first picked green for the freshmen to wear, sure had a colored viewpoint of the whole thing. We don't know about brains, but this year's class hits a new low when it comes to spirit.

Imagine two sophomores taking the pants off of ten freshmen three years ago. Or even last year.

The Sophomore said, "do you have a match?"
"You see, I need a light!"
"The Frosh turned pale, took off his pants, and didn't even fight."

Found in the exchanges:
"I woke up last night with the impression that my watch was gone. It was so strong that I got up to look."

"Well, was it gone?"
"No, but it was going."

That reminds us. In the last issue of the MINER last Spring Stojeba's name was misspelled twice. These two errors prove conclusively that Stojeba's five years at M. S. M. are not sufficient to merit the correct spelling of his name.

In the Spring a young man's fancy turns to what Kamper thinks of all year.

FIVE ESSENTIALS OF A GOOD DATE
1. SHE DOESN'T EAT BETWEEN MEALS.
2. SHE IS GOOD LOOKING.
3. SHE DOESN'T EAT TOO MUCH.
4. SHE TALKS WELL.
5. SHE DOESN'T EAT.

voice over telephone: "Are you the game warden?"
Game Warden: "Yes Ma'am."
Voice: "Well, I am so thankful. I have the right person at last. Would you mind suggesting some games suitable for a children's party?"

Best remark of the week . . .
Set 'em bar uptender.

OUR SOCIETY REPORTER INFORMS US THAT FLANARY HAS BEEN HAVING A LOT OF TROUBLE WITH HIS GLASSES LATELY. SOME CATTY SNAKE SAID THAT HE HAD HAD TOO MANY OF THEM.

Worm Loveridge was seen last week putting a false beard on his forehead. He explains that he adorns his forehead with whiskers to make it look like Lincoln.

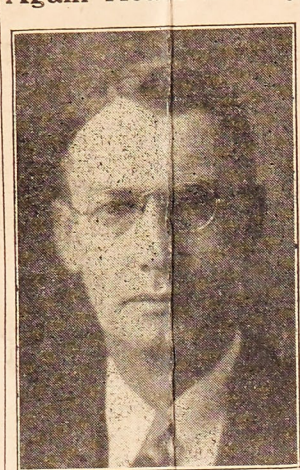

In spite of his comments Nevins is still holding his own. He knew nothing when he came to M. S. M. and he still knows nothing.

Jim Parker: "Mr. Scott, I want a box of prepared monaceticacidester of salicylic acid."
Mr. Scott: "You mean aspirin?"
Jim: "That's it. I have no memory for names."

Dods' girl can always tell when his car is at the door. It always knocks.

A freshman went to Hades once. Something he wished to learn; They sent him back to earth again. He was too green to burn.

Again Heads Society

Prof. E. W. Carlton

Carlton Is Reelected President of Society

Professor E. W. Carlton, who was recently reelected President of the Missouri Society of Professional Engineers, has been active in his duties during the past several weeks.

With the membership of the organization at new high of 580, the Executive Board over which Prof. Carlton presides, met Wednesday, August 17 in Jefferson City to plan a program and budget for the coming year. It was agreed that the program must include several meetings in areas where a large number of engineers are employed.

Under the general chairmanship of Professor J. B. Butler, first president of the organization, the Membership committee plans a goal of 1000 members by the first of 1939. The Executive Board also agreed that in the coming months a wider dissemination of information about registration and licensing of engineering schools and colleges, and many others in industry who are interested in engineering education. The Council is charged with the determination of policies of the Society and the general conduct of its affairs. Prof. Armsby was elected for a three-year term.

Prof. Armsby is a past president of the Missouri Branch of the Society, and also served as Secretary of the Missouri Branch for one term.

YOU KNOW THEM TOO

By Jimmy Carr

"The growth of a heavy beard makes one look more manly", thought John Rockwell Post, Student Council President, so during the summer months he proceeded to develop one of the densest growths seen since the days of Buffalo Bill. Not just a mustache or goatee, but a full fledged beard with sideburns and all.

Possibly it is this beard which is enabling him to perform the duties of his office so thoroughly. Leastwise, he has the full respect of a large Freshman Class and has conducted Freshman Week in a very workman-like manner.

Born in the year America entered the World War, Post has been a fighter ever since. His father lives on a farm near Parma, Mo., where John got a little of the hard work that goes with farm life.

Upon graduation from high school John picked up his things and went off to further his knowledge at the Cape Girardeau Teachers College. At Cape he learned various things including the fact that the life of a teacher had no appeal for him. He wanted something more rough and masculine, so in Sept. 1935, he entered the Missouri School of Mines. He immediately made himself a real benefit to the School of Mines and began to enter every activity in eight. He got into the M. S. M. band and blared forth some mean notes on the trombone for a couple of years. He was asked to join Theta Tau and is now Marshall of that engineering fraternity. After becoming elected by the Independents to the St. Pat Board, Johnny acted as St. Pat last spring and caused a mild confusion among last year's seniors. Plus that, John is secretary-treasurer of Blue Key, staff member of the "Miner", and a member of the General Lectures committee and, oh yes, we almost forgot something. As president of the Student Council, he holds what is probably the highest honor on the campus. Take a bow, Johnny.

After becoming elected by the Independents to the St. Pat Board, Johnny acted as St. Pat last spring and caused a mild confusion among last year's seniors. Plus that, John is secretary-treasurer of Blue Key, staff member of the "Miner", and a member of the General Lectures committee and, oh yes, we almost forgot something. As president of the Student Council, he holds what is probably the highest honor on the campus. Take a bow, Johnny.

Armsby Elected to Council of S. P. E. E.

Prof. H. H. Armsby, Registrar and Student Advisor of the School of Mines, was one of seven educators elected to the Council of the Society for the Promotion of Engineering Education at the national meeting of the Society held at College Station, Texas, during July. The Society has a membership of over three thousand throughout the U. S., Canada and foreign countries, and consists of teachers and administrative officers in engineering schools and colleges, and many others in industry who are interested in engineering education. The Council is charged with the determination of policies of the Society and the general conduct of its affairs. Prof. Armsby was elected for a three-year term.

Prof. Armsby is a past president of the Missouri Branch of the Society, and also served as Secretary of the Missouri Branch for one term.

THE MISSOURI MINER

SEPTEMBER 14, 1938

Clad in shorts instead of the conventional football attire, the six Missouri Intercollegiate Athletic Association teams went through workouts during the past week in preparation for the opening games two weeks hence. The hot Missouri sun has made practice almost impossible for a long period, and most of the coaches are either concentrating their workouts in one brief session, or holding two—one in the early morning and the other late in the afternoon.

Practice at Kirksville, Cape Girardeau and Maryville has only been underway since Monday, so the coaches are taking advantage of the warm weather to clad their men in shorts and concentrate on setting-up exercises. In addition to the conditioning workout, all three squads are receiving signal instructions, as well as the conventional passing and kicking work.

At Rolla and at Springfield scrimmage was the order, and the Miners wound up two weeks' work yesterday by going through a full length practice game, which had all the earmarks of a regular affray. The Bears have had one scrimmage, and Coach Howard Blair will probably send his charges through several this week.

Maryville Needs Center

Maryville went through a 20-minute scrimmage session last week, as Coach Ryland Milner got a preview of his new formations. His biggest problem is to find a center to replace Everett Richards, the Bears' All-Conference pivot man last year. The Maryville team has had an all-conference center for the past 10 years, and Milner is looking for someone to carry on the tradition. In addition to the center post, the Bearcat coach is worried about the lack of a first-class passer, as both experienced heavies on last year's eleven failed to return to school. At the present time it looks as if quarterback and co-captain Bill Bernau will have to take over the slinging duties.

Twenty lettermen are among the 50 players working out in the Bearcat football camp. School starts Tuesday.

A line that will average about 200 pounds is the prospect for the Kirksville eleven as Coach Earl Svendsen observed on Monday when he met his squad for the first time. The Bulldogs have two tackles, Herb Parsons and Harry Huston, who hit well above the 200 mark; two guards, Richard White and Alex Yaskiw, who also go over that mark, and a 180-pound center, Jack Mills. Then, too, the Kirksville ends, Elbert Willis and George Nelmark, hit close to the 180-pound mark, so the Svendsen outfit will probably have the biggest line of any team in the loop.

Add to that line W. C. Walden, 200-pound fullback; Orville Gregory, 190-pound halfback, and Bill Friez, 195-pound blocking back, and note that the Bulldogs finished fourth last year, and it can be understood why Coach Bullman at Rolla called the Bulldogs the "dark horses" of the loop race.

Large Group of Freshmen. Forty candidates, including 11 lettermen, nine from last year's team and two who were not members of the squad last season, answered Coach Abe Stuber's initial call Monday for football practice at Cape Girardeau. The Indians' opening game is set for Sept. 30, when Carbondale calls at the Southeast institution. Stuber's big problem is to replace several all-conference men from last year's championship squad, and he may find his answer in the large group of freshmen who reported on the first day. Eight linemen were on deck for the first workout, along with three backs.

Marvin Breuer, MSM '36, to Join Yankees

Marvin (Floppy) Breuer, MSM grad who is one of the mainstays of the Kansas City Blues pitching staff, is one of nine "farm hands" who has been called in to the parent New York Yankee club. Breuer will report to the Yankees next spring, according to an announcement made by the Yankees this week.

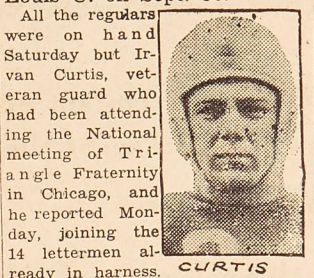

Breuer, who is the son of Mr. and Mrs. George V. Breuer, of Rolla, is completing his fifth season in professional baseball. He got his start in baseball with the local team, and then went to the Rogers, Ark., club in the Arkansas State League, where he compiled a fine record for the 1934 season. Bought by the Joplin club in 1935, when he was one of the outstanding hurlers in the Western Association, he spent the 1936 season with the Bingham-

Hot Sun Fails to Put Damper on M S M Gridiron Squad in Early Season Drills

Miners to Open Against St. Louis U. on Sept. 30; Irvan Curtis, Veteran Guard, Reports Late

By Jack Emery
Missouri Miner Sports Editor

Two weeks of practice under a broiling sun is not hurting the Miners' enthusiasm, according to Coach Gale Bullman, who has approximately 60 grid aspirants working out regularly in preparation for the season's opener with St. Louis U. on Sept. 30.

IRVAN CURTIS

All the regulars were on hand Saturday but Irvan Curtis, veteran guard who had been attending the National meeting of Tri-Angle Fraternity in Chicago, and he reported Monday, joining the 14 lettermen already in harness.

Curtis has gained in weight and is in fine trim to hold up his part of the line. The rest of the team is well-conditioned and an appreciable gain in weight can be seen. Barring accidents and bad breaks, Coaches Gale Bullman, Percy Gill and Jim Parker, can look forward to finishing higher in the M. I. A. A. race than last season.

Hampered somewhat by the loss of ends Joe Murphy, and Carl Lintner; tackles Dick Prough and Jack Flannery; guards Harold Volkman, John Kirwan and Ralph Stallman; and backs Jim Taylor, Don Hart and Alger Pomeroy through various causes, Coach Bullman must depend on his most promising freshmen.

The lettermen backs are expected to do the regular game work this year, and those back are Otis Taylor, snake-hipped halfback who was high scorer in the conference during his freshmen year; Walt Koziatek, diminutive and colorful quarterback; Dick Cunningham, speedy back and passer par-excellence; Harley Ladd, hard-hitting ball carrier; Shorty Baumstark, plunging fullback; pass defense expert Joel Loveridge, and Chicago Jim Kiestler, hard running signal caller. In the line are veterans Jim Wilson and Bob Nevins at ends; Bob Kling and Jim Stephens at tackles; Curtis and Frank Rogers at guards; and Joe Spafford and Preston Axthelm at center. In addition to these men Coach Bullman has Matt Donyanovich and Joe Strawhun to depend on.

The practice game on Saturday showed that several of the freshmen may be depended on during the season. Among the more promising men are Wadleigh, an end from Sedalia; Veale, a guard from St. Louis who was all-city for two years; Vick, a tackle from Seldan High in St. Louis; Kromka, a center from New Jersey and Krueger, a guard from Western Military Academy.

Freshmen backs include Keith Cook, a husky fullback; Schumacher, a all-county back from Normandy in St. Louis County; Flint, a Maplewood product; Rose, a capable man from Des Moines, and Harnett, who transferred from Marquette.

The season will depend a great deal on whether or not these new men come through. ton, N. Y. club in New York-Pennsylvania League, making such a good impression that he was sent to Oakland in the Pacific Coast League in 1937. His effective hurling in Oakland was nullified by poor offensive and defensive work by his team-mates at Oakland, and he was sent to Newark in the International League in midseason. After about a month with Newark, he was sent to Kansas City to finish the season. He returned to Kansas City again this year, and has been regarded as one of the outstanding prospects in the Yankee chain.

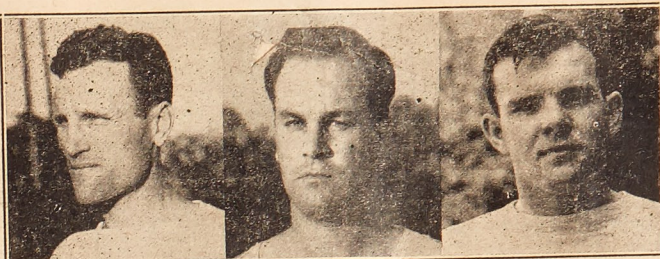

Kansas City has been battling for first place in the American Association the past week, and will certainly be in the league play-off between the first four teams. The winner of the play-off will meet the winner of the International League race in the Little World Series.

Coaches to Start Second Season

Coach Gale Bullman
Coach Percy Gill
Coach Jim Parker

To many fans the Billiken battle is the big game of the season. No doubt it would be a successful year if the Miners could take the Blue and White eleven into camp. However, the Arkansas team cannot be overlooked. Last year the Conway, Ark., team was undefeated and they played in the Christmas Day game on the West Coast. This year they play in New Mexico and California before they tangle with the Miners in the Homecoming affair. So when someone says that Arkansas should be easy, we just laugh.

Personalities: Irvan Curtis, the Miners star who has been moved to tackle, is 20 years of age and a graduate of the Oblong, Ill., High School. While he was in high school he was a star performer on the gridiron, and upon graduation entered the University of Illinois, where he captained the freshmen team. He transferred here two years ago, and played one year under former coach Harold Grant, and one year under Bullman.

A smart, heady player who is seldom on the sidelines for any reason, he acted as Miner captain several times last year when Dick Prough was not in the game. He is a senior in school, member of Triangle Fraternity and is called "Whitey" by his friends.

He—"Now, what makes you think those are male mosquitoes?" She—"They just can't leave my legs alone."

So if you want to say that I'm wrong save this copy of the MINER and check the standings at the end of the season. And while you are at it, why not pick them yourself.

Where Miners Meet
COLONIAL VILLAGE
Hi-Way 66

Who is going to win the M. I. A. A. championship this season? That's a question that most football fans around the state would like to know, but from the reports that have been coming in, it's going to be a wide open race, and any of four teams have good chances to be on the top of the standings when the final gun is fired.

Even the coaches are not certain about who will have the best team, and several schools have already been awarded the flag by the mentors. Down at Cape Girardeau head mentor Abe Stuber took one look at his championship squad and predicted that Maryville and the Miners would fight it out for the title. Abe lost 27 men by graduation, ineligibility, and failure to return to school.

Coach Ryland Milner of Maryville thinks Stuber is very much in the wrong and feels that the Bears haven't much chance. He said, "A full team of sophomores and they are giving us the title." Here at Rolla Gale Bullman thinks that the Miners have a chance for the title, but that too many positions are uncertain, referring to tackle and end, plus the fullback post.

The two new mentors at Kirksville, Earl Svendsen and Malcolm Eiken, are new to the conference and not familiar with the way the coaches sling the boloney, so they

M S M Represented in State Golf Tourney

The School of Mines was well represented in the Missouri State Amateur Golf tournament held during June at the Norwood Hills Country Club. Former Health Director, Dr. S. L. Baysinger entered the senior division, while Floyd Watts, Coach Gale Bullman and Prof. John Willson entered the championship flight.

Neither of the three qualified for the championship bracket, but Bullman and Watts' scores placed them in Class "A". In match play Watts won his first round but went down before Art Giles of Washington University in the second round, 5 and 3.

Bullman went to the semifinals before he was eliminated by Bert McDowell, who later won the Class "A" flight.

Robert Mann Weds Miss Shirley Danson

The marriage of Miss Shirley Myrdell Danson, daughter of Mr. and Mrs. Robert Danson of Rolla, and Robert L. Mann, son of Dr. and Mrs. C. V. Mann of Rolla, was solemnized on September 4, at the home of the Rev. E. P. Gabriel, the officiating minister.

Mrs. Mann is employed by the U. S. Geological Survey as stenographer and typist in the office of H. C. Beckman on the M. S. M.

811 Pine St.

Greetings From Scotts---The Miners' Co-op And Book Exchange

51 years at 8th and Pine

Fellows take it from an old timer, there isn't much new to gaze at. One of our robust freshmen named E. Miller seemed to have had a bit of trouble in possessing his outer garments, (only four pair) as like-wise did many others. Sucker born every minute and two to take him. Monday night the freshmen chose to return from the fairgrounds but their plans were somewhat altered. Tuesday morning the refreshed frosh received another defeat and many retreated home with their pants halfmast. Nesley was seen running around with a tape measure and he came out with a pair that fit him as close as wallpaper. The class of forty seemed to be a nuisance to a few seniors which again started our alert cameramen to take a few shots. (camera shots) One of the seniors was a McDonald, which made people think that a much better job could have been accomplished.

It seems that a few of the seniors are quite conscious of the fact that they are not taking any courses from the military department. The major needed some assistance to convey some luggage, but only two of the advanced military boys did their duty. (Livingston and Soult). Speaking of the old game, there are present in our midst, five senior chemicals who cannot see the blackboard from any other row than the first; how about it Mac?

Delapopolis inquired of Fiss (the graduate lab assistant) whether he (Fiss) was a frosh or a soph. Better get introduced Sammy, you'll need it. Compton did not like the idea of introducing his recent date to the boys and also claimed that she didn't care to dance with strangers.

Crowbar Kelley and Parker went for a ride with some out of town lassies. After riding for two minutes Parker's date told him, of course you know I am married (Kelley also knew). Is Altama in the milk business or does he make it a hobby of driving milk trucks? The varsity orchestra did not seem itself without Gilmore as the maestro and it is evident that many of his followers would like to see him back at his old position.

The Sigma Nu's seem to be quite enthused over a certain young lassie that started out this year. Her

picture of rather large dimensions is making the rounds of the boy's desks, along with a bill of sale. SOME THINGS WE'VE WONDERED ABOUT:

(1) Did Stojeba get his walk from watching a chicken or does that strut come natural? (2) What were the five couples doing on the golf course the night of the class fight? (3) How Spalding at the Angle House rates such a cute girl as the one from Arkansas? (4) Where Tom Harsell hung his pin this summer, and why he tried to cover it up by running lost ads in the paper? (5) How "Kozy" rates with the ticket seller at the cinema? (6) Why the Freshmen are a bunch of sissies this year? (7) Why Katz thinks he can run the Varsity Orchestra when his own playing is poor? (8) Why the Freshman still fall for the old "Widow Gag"? Ask the Pikers. (9) Why a dance permit is necessary when one of the fraternities have a drop-in? (10) Why Ed Kelly doesn't get a new line and quit giving the same one to every gal? (11) When Post is gonna get rid of that adornment on his face? (12) Why Baumstark didn't hang his pin this summer? Did a Snake from Washington U. beat you to it? (13) Why the Lambda Chi's don't teach Kilgore to quit the fire gag? (14) Why the Sigma Pi's keep so quiet about their activities. I think it best to quit now, before my eyes are closed!

CLASS FIGHT

(Continued from Page 1)

The stream of water from the hose. In the meantime a mud-sling battle had started during which everyone, including the Student Council referees, received a fresh coat of mud. When order was finally restored by the highly efficient Student Council, the next event, a sand bag fight, was begun. This event was easily won by the sophomores due to an inexhaustible supply of sand bags concealed in the bushes behind their lines.

In the next event the frosh were anointed a squire to the knight of St. Pats by a ceremony similar to baptism, but in some cases more closely resembling drowning. Another coat of mud was given and after kissing a "39", each freshman who wished it, or did not

On S. P. E. E. Council

H. H. Armsby

This Scientific World

A chemical cure for cancer is in the offing, reports Dr. Carl Voegtlin, Chief of the National Cancer Institute of the U. S. Public Health Service. Coal tar derivatives and certain sulphur compounds show great promise in curing the "curse of the ages".

Arnold Mallis of Los Angeles, California, reports the discovery of the "Army Ant" in his state. Can it be that this subversive European influence has taken effect on even our American insects? A case for the Dies Committee, we call it.

The artificial blood used by the Lindbergh-Carrel "glass heart" apparatus is derived from the common salt water horseshoe crab. However, this blood, when oxygenated, is bright blue instead of the conven-

wish it, was given a chaw of the finest blend of long green obtainable, purchased by funds from the soph treasury.

Concluding was the snake dance down Pine Street by the again trouser-less frosh, after which a few yells were given. After free drinks at Scott's, 41's and 42's alike departed for home, the bathtub, and more pants.

tional red. Who would ever think that the Kentuckians and a species of crab are blood brothers? Maybe the horseshoe has something to do with it.

If a string of T. N. T. four and one-half miles long were to be exploded on one end, the other end would go off in little more than one second. But, on the other hand, Hitler is eight thousand miles away. so what difference does it make?

Sally Rand recently changed her routine from a fan-dance to a bubble dance and now makes money on the side by selling her six-foot balloons to the U. S. Navy for targets and to the U. S. Weather Bureau for observation balloons.

During the first ten days of May on Wake Island's famous soilless farm, 33 pounds of tomatoes, 20 pounds of lettuce, 20 pounds of stringbeans, 15 pounds of squash, and 44 pounds of corn were harvested from the shallow water-filled trays in which the crops are grown.

Quite a powerful explosive, nitrated mannitol, has lately been developed from an alcohol derived from corn sugars. However, if you ask John Post, or Wade Waters, you will find that the Swamp-Easters made dynamite from corn before laboratories were ever invented.
